Mahesh in CMC's general ward

Mahesh* (name changed), a 36-year-old family man from Vellore, lived a happy life with his wife and two children. However, his world turned upside down when he suddenly developed a high-grade fever, persistent headache, and an altered mental status. He was unconscious and unable to move. His worried family rushed him to a nearby hospital. Despite initial treatment, his condition did not improve. He was referred to CMC Vellore for further evaluation. At CMC, Mahesh was admitted in a general wards under the Department of Medicine. A series of tests, including a brain CT scan, revealed that he was suffering from acute meningitis and

increased intracranial pressure (ICP). Mahesh was immediately started on antibiotics. Although his condition initially seemed to improve, his mental situation worsened suddenly. Further scans were done. Mahesh was then given steroids, which helped stabilize his condition. Within three days, he improved significantly, and he was able to walk again and was eventually discharged from the hospital. Mahesh and his family are extremely grateful for the timely care and the financial assistance given.

Thank you for your thoughtful giving!**patient details shared with consent & name changed to protect their privacy*
